**AMENDMENT**

**In the Claims:**

1.      (currently amended)  A server for a network, the server enabling a user at a station to scan a document <u>at a scanner</u>, ~~the station comprising:~~

~~a computer connected to the network;~~

~~a browser installed on the computer to enable the user to browse the network;~~ ~~and~~

~~a scanner in communication with the computer;~~

the server comprising:

a database of scanner drivers;

a driver selection system ~~that enables~~ <u>to enable</u> the user to select a driver for the scanner from the database of scanner drivers <u>in response to one or more inputs provided to a browser hosted at said station and received at said server over a data transmission network</u>; and

a delivery system ~~that transfers a~~ <u>to transfer said</u> selected driver to <u>said station</u> ~~the computer and causes the computer to execute the driver;~~

~~wherein the user uses the browser and the driver selection system to select a driver for the scanner, the delivery system sends the driver to the computer, the computer executes the driver, the driver uses the scanner to scan a document, and scanning data corresponding to the document is saved in a predetermined location.~~

2. (currently amended): The server of claim 1 further comprising a destination selection system ~~that enables~~ to enable the user to use the browser to select ~~the~~ a predetermined location for saving the scanning data on a computer.

3. (original): The server of claim 2 wherein the predetermined location comprises a universal resource locator (URL) or an electronic mail (e-mail) account address.

4. (currently amended) The server of claim 2 wherein ~~the computer further comprises a media for storing data, and~~ the predetermined location specifies ~~that the~~ a media to be used to save the scanning data.

5. (currently amended) The server of claim 1 further comprising a login system adapted to enable said user to access said driver selection system following ~~for~~ establishing an identity of the user~~; wherein prior to using the driver selection system, the user first uses the login system to log into the server computer~~.

6. (currently amended) The server of claim 5 wherein the login system ~~correlates~~ is adapted to correlate the identity of the user with an account on the server, and wherein the scanning data is saved in association with the account.

7. (currently amended) The server of claim 6 wherein the account ~~is~~ comprises an e-mail account.

8.    (original) The server of claim 6 further comprising a viewing system for enabling the user to view the scanning data saved in the account.

9.    (original) The server of claim 1 wherein the selected driver is transferred to the computer in a self-extracting executable file format.

10.    (currently amended) The server of claim 1 wherein the driver is <u>adapted to</u> <u>be</u> removed from the computer after the scanning data is saved in ~~the~~ <u>a</u> predetermined location.

11.    (currently amended):  The server of claim 1 wherein the server further comprises a network connection ~~and the server communicates with the station through~~ ~~the network~~ <u>adapted to transmit information between said data transmission network</u> <u>and at least one of said driver selection system and/or said delivery system</u>.

12.    (new):  A system comprising:

a scanning station, said scanning station comprising a computer connected to a data transmission network, said computer hosting a browser, and a scanner in communication with said computer; and

a server, said server comprising:

a database to store a plurality of scanner drivers;

a driver selection system to select one of said plurality of scanner drivers in response to one or more inputs provided to said browser and received from said data transmission network; and

a delivery system to transmit said selected driver to said computer over

said data transmission network,

wherein said transmitted driver is adapted to enable said computer to store

images captured at said scanner.

13.    (new):        The system of claim 12, wherein said server is further

adapted to populate a menu viewable at said computer on said browser identifying two

or more of said plurality of scanner drivers.

14.    (new):        The system of claim 12, wherein said server is adapted to

render said menu according to a hypertext transfer protocol.

15.    (new):        The system of claim 12, wherein said server comprises a

login system that enables said computer to access said driver selection system in

response to authentication of said user.

16.    (new):        The system of claim 15, wherein said server is adapted to

store one or more cookies on said computer in response to said authentication.

17.    (new):        A method comprising:

receiving information over a data transmission network from a browser hosted on

a scanning station;

enabling selection of at least one scanner driver from a database storing a

plurality of scanner drivers in response to said received information; and

transmitting said selected scanner driver to said scanning station.

18.    (new):   The method of claim 17, and further comprising:

authenticating a user at said scanning station in response to information received at said browser; and

enabling said selection of said at least one scanner driver in response to said authenticating said user.

19.    (new): The method of claim 17, wherein said receiving said information over said data transmission network comprises receiving said information according to a hypertext transfer protocol.

20.    (new): The method of claim 17, wherein said enabling selection of said at least one of said scanner drivers in response to said received information comprises receiving inputs from a menu rendered on said browser.
